

ICENTER.SUITE

SOFTWARE

FEATURES

- Live updates of Units in a Push procedure
- Remote access and control of the individual units is possible
- No data inconsistencies

SOFTWARE FOR THE PERFECT FLEET IT

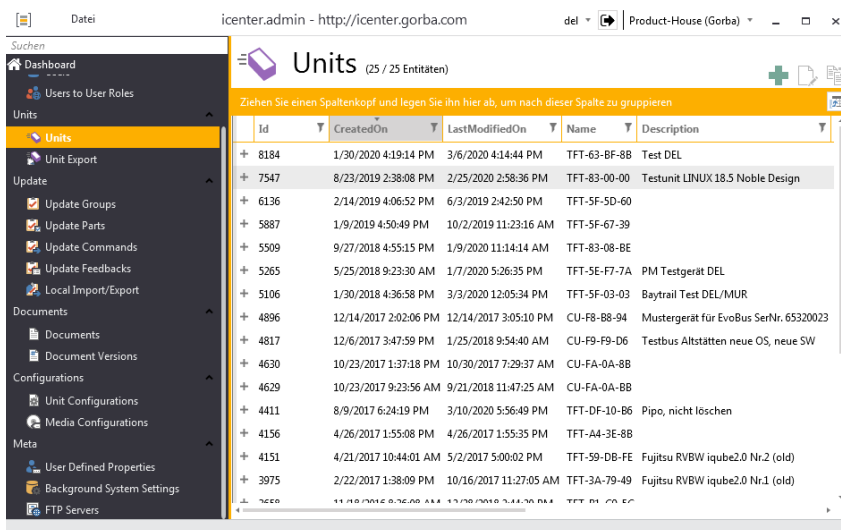

Manage, configurate, review, layout, cloud hosting and much more. icenter.suite can do everything and is easy to operate. The software package is modular and includes all the applications you need to maintain, check and manage your passenger information system.

And: we provide the applications that are most suited to your server. When you take advantage of our Cloud offer, you can reach every device by remote access. This allows software updates and layout adjustments to be carried out flexibly and remotely. All the icenter.suite tools can be easily combined with each other and come together as a complete, comprehensive package. You won't need any other software to provide your passengers with information on the go.

FEATURES

- Configuration of the complete system solutions within the vehicle
- Live updates of the displays (units) via push procedure
- Grouped unit updates are possible, easy administration of user accounts
- Configuration of different protocols
- Various update options (USB, FTP server, Azure)

THE ADMINISTRATION TOOL FOR DEVICE MANAGEMENT AND SOFTWARE UPDATES

With icenter.admin you are able to manage configure and update every device of your passenger information system.

The administration of update groups, users, clients and their authorizations is also possible.

The tool distributes the desired data to all devices. While it is connected to your background system and the corresponding servers in our cloud. You are able to manage all of that from your workspace.

The built-in configuration assistant actively supports you in configuring the devices and prevents possible configuration errors. Managing devices, data and user accounts has never been easier.

ICENTER.SUITE

MODULES

MEDIA

FEATURES

- Traffic lines and advertising can be combined on the same display
- Local simulation / preview of the layout
- Integration of dynamic content (e.g. RSS feed, video streaming) in the vehicle
- Pool functionality for easy rollout of advertising content
- Audio configurations and complete integration of text to speech in different languages with different voices

DESIGN TOOL FOR LAYOUTS AND PLACEMENT OF ADVERTISEMENTS

icenter.media was developed with the aim of making the design of TFT display layouts as simple as possible. Via the graphic user interface its easy to create individual layouts with text, images, graphics, photos and videos at the click of a mouse. All directly from your desk.

Creating screens that show passenger information and advertisements at the same time is possible also the inclusion of dynamic text fields and audio layouts for announcements – which can be based on the vehicle's location if desired. In just a few steps, destination texts can be edited or composings of complete image and video sequences. Even picture-in-picture presentations can be created with ease.

The contents are managed by a user-friendly content management system (CMS) – which can also be cloud-based if desired. Data can be transferred via Wi-Fi, a mobile connection (3G, 4G, 5G) or USB. All of this makes icenter.media the perfect software tool for designing your passenger information. Designing layouts couldn't be simpler.

ICENTER.SUITE

MODULES

DIAG

FEATURES

- Remote access and remote control of the individual units possible
- Remote logs make easy troubleshooting possible
- Remote access to the unit
- Live view on the passenger information system
- Integration of all available devices and local access to them

THE DIAGNOSTIC TOOL - REDUCES THE MAINTENANCE EFFORT TO A MINIMUM

With icenter.diag, you'll save time and money operating your passenger information system.

This is possible because the software module enables you to remotely access every connected device if an error message occurs. If a mobile connection is provided.

You can access all screen content in the vehicle (through live view) along with the system status (including elements such as CPU, RAM and disk usage). The data can easily be read out remotely, from the entire fleet. Each unit in the vehicle can be individually selected and be administered.

This allows you to decide from your office whether a device needs to be manually serviced or not. Often, a remote reset is all that is needed to correct the malfunction. icenter reduces maintenance costs to a minimum – and therefore increases the uptime of your fleet.

MODULES

CALCULATION

FEATURES

- Combining different basic arithmetic operations
- Sorting and filtering the calculated results and / or tables
- Present the results interactively on the screen
- Complete integration into the icenter.suite

ICENTER.CALCULATION THE CALCULATION TOOL FOR REAL PROFESSIONALS

With the software icenter.calculation you can calculate different values. We support basic arithmetic and combinations of different calculations. The results and tables can be easily sorted and filtered.

For example, the difference between the shall and actual timetable can be easily displayed on the device. Countdowns to the next departure and much more is possible. This ensures optimal information of your passengers.
